Summary

Full Stack Developer with 3+ years of experience building scalable, cloud-native applications across healthcare, fintech, and e-commerce domains using Java, Spring Boot, React.js, Angular, Node.js, Kafka, and AWS. Skilled in developing microservices, distributed systems, RESTful APIs, and real-time event-driven architectures with expertise in Docker, Kubernetes, Jenkins CI/CD, and cloud automation. Experienced in integrating AI/ML solutions including OpenAI APIs, LLMs, and RAG-based intelligent systems to improve operational efficiency and platform reliability. Strong background in frontend engineering, backend optimization, performance tuning, and secure high-throughput systems with a proven ability to deliver impactful business solutions in Agile environments.

Skills

- Programming Languages:** Java, Python, C++, JavaScript, SQL, Kotlin, Go
- Backend Development:** Spring Boot, Spring WebFlux, Microservices, RESTful APIs, gRPC, WebSockets, Spring Batch, Serverless Architecture
- Cloud & DevOps:** AWS (EKS, EC2, Lambda, S3, DynamoDB, CloudWatch, X-Ray, CodeDeploy), Docker, Kubernetes (EKS), Jenkins CI/CD, CloudFormation, Containerization
- AI/ML & Generative AI:** OpenAI APIs, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Generative AI, PyTorch, TensorFlow, Scikit-Learn, spaCy, AI-Based Anomaly Detection, Intelligent Log Analysis
- Data Engineering & Databases:** Apache Kafka, Redis, PostgreSQL, MySQL, DynamoDB, Stream Processing, Query Optimization, Database Sharding
- Frontend & Visualization:** Angular, GraphQL, D3.js, A/B Testing
- Performance & Monitoring:** New Relic APM, AWS X-Ray, Distributed Tracing, Logging & Monitoring, Load Testing (Locust), Latency Optimization, Performance Tuning
- System Design & Architecture:** High-Throughput Systems, Low-Latency Architectures, Scalability, Fault Tolerance, Idempotency, Event-Driven Architecture, Microservices Architecture, MVC Architecture
- Security & Reliability:** Fraud Detection, Incident Resolution, SLA Optimization, Canary Deployments, Rollback Strategies, Secure API Development
- Testing & QA:** JUnit, Mockito, Selenium, JMeter, Postman, Unit Testing, Integration Testing, Test Automation, TDD, BDD
- Software Engineering Practices:** Agile, Scrum, SDLC, SOLID Principles, Code Reviews, Refactoring, Swagger/OpenAPI, Pair Programming, Mentoring
- Version Control:** Git, GitHub, Bitbucket, SVN

Experience

Full Stack Developer

01/2026 – Current
USA

CVS Health

- Architected scalable healthcare microservices using Java, Spring Boot, Kafka, and AWS EKS, to modernize claims and patient workflow systems, reducing API response latency by 38% and improving platform reliability for over 2 million healthcare members.
- Engineered AI-assisted incident analysis pipelines using OpenAI APIs, Python, and Retrieval-Augmented Generation (RAG), to automate production log investigation and intelligent root-cause detection, decreasing MTTR by 45% for cloud operations teams.
- Developed responsive provider and member-facing applications using React.js, TypeScript, GraphQL, and Node.js, to streamline healthcare authorization and billing workflows, increasing user engagement scores by 28% for internal care management teams.
- Implemented distributed event-driven architectures with Kafka, Redis, Docker, and Kubernetes, to process high-volume healthcare transactions and real-time notifications, supporting 15K+ TPS with 99.97% application uptime for enterprise healthcare services.
- Automated CI/CD and cloud-native deployment strategies using Jenkins, AWS Lambda, CloudFormation, and Kubernetes, to accelerate release cycles and ensure zero-downtime deployments, reducing production deployment effort by 60% for engineering stakeholders.

Full Stack Software Developer

06/2022 – 12/2023
India

Lenskart

- Designed and developed scalable e-commerce microservices using Java, Spring Boot, MySQL, and REST APIs, to optimize eyewear product catalog and order management systems, improving checkout performance by 35% for online customers.
- Built dynamic frontend modules using Angular, JavaScript, and GraphQL, to enhance virtual product browsing and personalized shopping experiences, increasing customer retention and reducing page load time by 25% for digital commerce platforms.
- Integrated Kafka-based asynchronous event processing and Redis caching layers, to support real-time inventory synchronization across warehouses and retail stores, reducing stock mismatch incidents by 40% for operations teams.
- Containerized and deployed cloud-native applications using Docker, Kubernetes, Jenkins, and AWS EC2, to streamline scalable deployments and environment consistency, reducing infrastructure provisioning time from hours to minutes for DevOps teams.
- Collaborated with QA and product teams in Agile sprint cycles using JUnit, Mockito, Selenium, and Postman, to improve application quality and release stability, achieving 85% test coverage and reducing production defects by 30%.

Software Developer

05/2021 – 05/2022
Remote, India

BharatPe

- Developed secure payment processing APIs using Java, Spring Boot, SQL, and Node.js, to support merchant onboarding and UPI transaction workflows, enabling seamless payment experiences for thousands of small business users.
- Refactored high-performance transaction validation modules using C++ and multithreading techniques, to optimize fraud detection and payment processing efficiency, reducing transaction processing latency by 22% for fintech platforms.
- Engineered responsive merchant dashboards using React.js, JavaScript, and RESTful APIs, to provide real-time payment insights and transaction monitoring, improving operational visibility for business stakeholders.
- Implemented cloud-based monitoring and logging solutions using AWS CloudWatch, Docker, and Jenkins CI/CD pipelines, to enhance deployment reliability and proactive issue detection, improving production stability across distributed systems.
- Collaborated with cross-functional engineering teams to build scalable backend services and database optimization solutions using MySQL and Redis, to improve transaction throughput and system scalability during peak payment traffic events.

Education

Master of Science in Information System Technologies

University: Wilmington University

Dec 2025

Delaware, USA
