New Jersey, USA | +1 (551) 396-8215 | kiransubramani2@gmail.com | [LinkedIn](#) | [Portfolio](#)

Summary

Full Stack Developer with 4+ years of experience building scalable enterprise applications using Java, Spring Boot, Python, React, Angular, Node.js, Microservices, REST APIs, and distributed systems across finance, retail, and e-commerce domains. Experienced in developing cloud-native solutions on AWS and Azure, implementing event-driven architectures with Kafka, and delivering secure, high-performance applications using Docker, Kubernetes, and CI/CD pipelines. Skilled in Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), OpenAI APIs, and AI-powered automation to enhance operational efficiency and business outcomes. Proficient in SQL, PostgreSQL, MongoDB, Redis, Agile methodologies, system design, and cross-functional collaboration, with a strong focus on scalable architecture, reliability, and modern software engineering practices.

Skills

- **Programming Languages:** Java, Python, C++, JavaScript, TypeScript, SQL
- **Backend Development:** Spring Boot, Node.js, Express.js, Microservices, RESTful APIs, Distributed Systems, Event-Driven Architecture, Asynchronous Processing
- **Frontend Development:** React.js, Angular, Redux, HTML5, CSS3
- **AI & Generative AI:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), OpenAI APIs, LangChain, LangGraph, CrewAI, Prompt Engineering, AI-Powered Automation, PyTorch, Scikit-learn
- **Cloud Technologies:** AWS (Lambda, DynamoDB, CloudWatch, X-Ray), Microsoft Azure (Azure Functions, Azure App Services, Azure Storage), Cloud-Native Applications, Serverless Architecture
- **Messaging & Integration:** Apache Kafka, Solace Pub/Sub, MuleSoft
- **Databases & Storage:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Pinecone, Weaviate
- **DevOps & Automation:** Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, CI/CD Pipelines
- **Monitoring & Observability:** Datadog, Logging, Monitoring, Alerting, Performance Tuning, Production Support
- **Enterprise Technologies:** SAP S/4HANA, SAP SD, Billing Systems, Order-to-Cash, E-Commerce Platforms, Payment Gateway Integration
- **Software Engineering:** Object-Oriented Programming (OOP), Design Patterns, System Design, Secure Coding, Agile/Scrum, SDLC, Unit Testing, Code Reviews, Technical Documentation, Cross-Functional Collaboration

Experience

Full Stack Developer

01/2026 – Current
USA

Wells Fargo

- Architected and delivered enterprise-scale device subscription and order management platforms using Java 17, Spring Boot, Microservices, Angular, REST APIs, Redis, and AWS, streamlining commercial leasing and fulfillment operations across multiple global markets while supporting high-volume transaction processing.
- Engineered event-driven architectures leveraging Solace Pub/Sub, asynchronous messaging, MuleSoft integration, SAP S/4HANA FICA, and EZLease systems, enabling real-time orchestration of order lifecycle events including billing, payments, device upgrades, replacements, subscription activations, cancellations, and financial reconciliations across enterprise ecosystems.
- Developed and deployed Generative AI solutions using OpenAI GPT, Anthropic Claude, LangChain, LangGraph, CrewAI, RAG frameworks, Pinecone, and Weaviate, building intelligent enterprise assistants and AI copilots that automated policy interpretation, contract analysis, operational decision-making, and customer support workflows.
- Built machine learning and predictive analytics pipelines using Python, PyTorch, Scikit-learn, and LLM embeddings to identify subscription churn risks, detect payment anomalies, analyze customer behavior patterns, and generate actionable business insights that improved operational efficiency and proactive decision-making.
- Designed resilient cloud-native microservices utilizing Spring Cloud, Eureka, Consul, Docker, Kubernetes, AWS CloudWatch, AWS X-Ray, and distributed caching strategies, improving application scalability, fault tolerance, observability, and system performance while sustaining thousands of concurrent API requests and large-scale event processing workloads.
- Automated end-to-end CI/CD and DevOps workflows using GitHub Actions, Flyway, Docker, Kubernetes, Datadog, Infrastructure Automation, and Agile delivery practices, accelerating release cycles, ensuring deployment consistency across environments, reducing MTTR, and maintaining high platform availability for mission-critical enterprise applications.

Full Stack Software Developer

06/2022 – 12/2023
India

Accenture

- Developed enterprise applications integrating SAP SD and billing systems with Java Spring Boot services, to automate pricing and order-to-cash workflows, improving operational efficiency for enterprise retail and manufacturing clients.
- Built RESTful APIs and middleware services using Java, Spring, and Node.js, to connect SAP backend systems with modern web applications and partner platforms, enabling scalable integration for business operations teams.
- Designed data pipelines and reporting services using SQL, Python, and ETL frameworks, to generate operational dashboards and financial reports supporting business intelligence teams and executive stakeholders.
- Implemented microservice components and asynchronous job processing using Kafka and Redis queues, to streamline batch billing processes and reduce transaction processing delays by 30%.
- Enhanced frontend applications using Angular, JavaScript, and TypeScript, to build internal dashboards for pricing and billing workflows, improving usability for operations and sales teams.
- Automated CI/CD workflows using Jenkins, GitLab pipelines, and Docker, to standardize application deployment across environments and reduce release cycle time by 25% for development teams.
- Optimized database performance via PostgreSQL and SQL Server query tuning improving billing report generation and improve data retrieval speeds

Software Developer	05/2021 – 05/2022
Flipkart	Remote, India
- Assisted in developing backend services using Java, Spring, and REST APIs, contributing to order processing and inventory management modules that supported high volume marketplace transactions for Flipkart’s e-commerce platform. - Contributed to implementation of microservice components and event-processing pipelines using Python and Kafka, enabling reliable handling of product catalog updates and order events across distributed systems. - Optimized memory management and implemented multithreading with C++ Standard Library, improving application performance by 20%. - Developed frontend components using ReactJS, JavaScript, and Redux, improving seller dashboard usability and enabling merchants to track inventory and order fulfillment information more efficiently. - Supported database design and query optimization using MySQL and MongoDB, helping maintain product catalog and order data across large marketplace datasets with improved retrieval performance. - Integrated external payment gateway and logistics APIs, assisting in automating order lifecycle workflows from checkout to shipment tracking for operations and fulfillment teams. - Built internal data analysis scripts via Python and SQL, generating reports on seller performance and product demand trends to support marketplace. - Collaborated with product managers and senior developers to translate functional requirements into scalable application features, contributing to improvements in seller onboarding and catalog management workflows.	

Education	
Master of Science in Information System Technologies	Dec 2025
Wilmington University	Delaware, USA
